

LOGIC HIU.

HEAT INTERFACE UNIT - 75 INDIRECT.

The Logic heat interface unit is the latest 'intelligent' range of Logic HIUs from Ideal. The Logic HIU is the complete solution for instantaneous hot water production and space heating control.

This is an indirect wall mounted HIU, providing 75 kW instantaneous priority DHW and 15 kW modulated CH. This can be converted to under floor heating including inbuilt safety thermostat capability.

- Twin plate design hydraulically separates both domestic and space heating from the central primary supply
- Internal electronic control unit with LCD display
- The standard unit can be set to hold a stable heating flow temperature, to suit the installation (radiators, UFH for example), but crucially, can also be set to vary the heating flow temperature automatically depending on the temperature of the heating return water
- Automatically compensate for changes due to external influences, such as outside temperature etc. thereby ensuring that the unit and the system operate at maximum efficiency
- Convertible to underfloor heating
- Configurable hot water priority
- Pressure independent control valve
- Pump bypass protection, in case of complete radiator TRV shutdown
- Ability to pre-heating of the DHW exchanger
